

# Alcatel-Lucent OmniAccess Stellar AP1301H

## Indoor Hospitality Wi-Fi 6 Access Point

The [Alcatel-Lucent OmniAccess® Stellar AP1301H](#) WLAN Access Point with 802.11ax technology, enables, faster speeds, more capacity, and efficient airtime allocation for clients on both 2.4Ghz and 5Ghz Wi-Fi bands. Wi-Fi 6 technology can serve a higher density of clients, deliver more capacity for bandwidth-hungry and latency-sensitive voice and video clients, and provides a dependable secure network. The OmniAccess Stellar AP1301H brings unparalleled connectivity, coverage, and performance for in-room applications such as hotels, classrooms, dormitories, clinics, remote office/home office and more.

The 802.11ax high performance OmniAccess Stellar AP1301H is designed to accommodate the diverse growing capacity needs of next-generation mobility and IoT-enabled networks. The OmniAccess Stellar AP1301H is powered with dual radios, 2.4Ghz/5Ghz band serving high density Wi-Fi clients, supporting a maximum aggregate data rate of ~1.77Gbps (1.2Gbps in 5 GHz and 573Mbps in 2.4GHz), and an integrated Bluetooth®/Zigbee radio making it ideal for broad scope of IoT end-points and applications such as location analytics and building automation. The AP1301H offers 1x Gigabit ethernet uplink, 4x Gigabit downlink, with one providing 802.3af PSE to power the attached IoT device, one pair of RJ-45 passthrough ports for analog phones, and a USB 2.0 port.

The OmniAccess Stellar AP1301H supports 802.11ax (Wi-Fi 6) features, which include OFDMA, DL MU-MIMO, UL MU-MIMO, 1024-QAM modulation and more, making tomorrow's diverse digital workspaces highly reliable and efficient.

The OmniAccess Stellar AP1301H features enhanced WLAN technology with RF Radio Dynamic Adjustment, a distributed control Wi-Fi architecture, secure network admission control with Unified Access, built-in application intelligence and analytics, making it ideal for enterprises of all sizes that demand a simple, secure and scalable wireless solution.

## 802.11 ax (Wi-Fi 6) high-efficiency features

IEEE 802.11ax allows enterprises to deliver high performance wireless LAN services with increased throughput, enabling more clients in dense environments and bringing power efficiency to IoT devices, while remaining fully backward compatible with existing 802.11 a/b/g/n/ac deployments. The 802.11ax standard is a dramatic step forward in wireless LAN technology for all organisations. Some of the key 802.11ax features enabled on the OmniAccess Stellar AP1301H include:

- Orthogonal Frequency Division Multiple Access (OFDMA) enabling more clients to simultaneously operate in the same channel and thereby improve efficiency, latency, and throughput. OFDMA can concurrently address multiple clients in both directions downlink (DL) and uplink (UL), including OFDMA Resource Units (RUs). OFDMA is very effective in environments where there are many devices with short frames demanding lower latency.
- Multi-user multiple input, multiple output (MU-MIMO) allowing more data to be transferred at once and enabling an access point to handle a larger number of concurrent clients
- 1024 quadrature amplitude modulation mode (1024-QAM) boosting peak data-rates by as much as 25 percent
- BSS Coloring improving spatial reuse in dense environments by providing a mechanism for colour coding different overlapping BSS's, allowing more simultaneous transmissions
- Extended Range (ER) providing increased coverage in scenarios where receiving side encounters high path loss and channel delay spread, especially in outdoor environments
- Target Wake Time (TWT) making Wi-Fi CERTIFIED 6 devices more power efficient. This capability lets client devices sleep much longer, and wake up to less contention, extending the battery life of smart phones, IoT sensors, and other devices.
- Transmit beamforming improving signal power resulting in significantly higher rates at a given range

## Deliver enterprise-grade security and scale with simplicity

The OmniAccess Stellar AP1301H enables a visionary distributed Wi-Fi architecture with centralised management and policy control. This enforces security at every step starting at the network edge, and allowing unparalleled scale in network capacity. This architecture is vital for enabling the next generation of digital enterprise that demands business agility, seamless mobility and secure IoT-enabled infrastructure empowering business transformation through continuous innovation.

The OmniAccess Stellar AP1301H provides enhanced security with WPA3, a new security standard for enterprise and public networks, improving Wi-Fi security by using advanced security algorithms and stronger ciphers in enterprises including the 192-bit security suite. Public spaces which provide open non-protected access, will soon provide encryption and privacy using OmniAccess Stellar, ready to support a new security standard Wi-Fi Enhanced Open based on Opportunistic Wireless Encryption (OWE).\*

The access points can be deployed in three different modes, all through a single version of software, simplifying IT operations.

For medium- to large-scale enterprises, the Alcatel-Lucent OmniVista® Network Management System provides secure plug-and-play APs for large scale deployment, with user friendly workflows for wireless services and unified access for end-to-end security. It comes with an integrated Unified Policy Authentication Manager (UPAM) which helps define the authentication strategy and policy enforcement for employees, guest management, and BYOD devices. The OmniAccess Stellar AP1301H has built-in DPI technology providing real-time Application Monitoring and enforcement capabilities. The network administrator can obtain a comprehensive view of applications running in the network and apply adequate controls to optimise the performance of the network for business-critical applications. OmniVista provides advanced options for RF management, wIDS/wIPS for intrusion detection and prevention, and heatmaps for WLAN site planning. To further simplify IT, the APs can be managed as one or more access point groups (a logical grouping of one or more access points).

\* The hardware is ready, and will be supported in a future software update.

## Cloud-enabled with OmniVista Cirrus Network Management as a Service

The OmniAccess Stellar AP1301H can be managed by the Alcatel-Lucent OmniVista® Cirrus cloud platform. OmniVista Cirrus powers a secure, resilient, and scalable cloud-based network management platform. It offers hassle-free network deployment and easy service rollout with advanced analytics for smarter decision making. OmniVista Cirrus also offers IT-friendly unified access with secure authentication and policy enforcement for users and devices.

## On premises deployment with OmniVista 2500 Network Management System (NMS)

The OmniAccess Stellar AP1301H can be managed on-premises from the Alcatel-Lucent OmniVista 2500 NMS.

For small- to medium-size enterprises, Wi-Fi Express provides secure web managed (HTTPS) cluster deployment.

The OmniAccess Stellar AP1301H by default can operate in a cluster architecture to provide simplified plug-and-play deployment. The AP cluster is an autonomous system that consists of a group of OmniAccess Stellar APs which is managed by one AP that is elected as the primary virtual manager. One AP cluster supports up to 255 APs.

The AP cluster architecture ensures simplified and quick deployment. Once the first AP is configured using the configuration wizard, the remaining APs in the network will come up automatically with an updated configuration. This ensures the whole network is up and functional within a few minutes.

The OmniAccess Stellar AP1301H also supports secure zero-touch provisioning with Alcatel-Lucent OXO Connect R2 which provides a mechanism by which all APs in a cluster will obtain bootstrap data securely from an on premises OXO Connect.

The W-Fi Express mode supports role-based management access to the AP cluster which includes Admin, Viewer, and GuestOperator access. GuestOperator access simplifies guest account creation and management, and can be used by any non-IT person such as a front desk worker or receptionist. The OmniAccess Stellar AP1301H also supports a built-in customisable captive portal which enables customers to offer secure and seamless guest access experience.

## Quality of Service for Unified Communications apps

The OmniAccess Stellar AP1301H supports fine-tuned, Quality of Service (QoS) parameters to differentiate and provide appropriate QoS for each application such as voice, video and desktop sharing. Application aware RF scanning avoids interruption of real-time applications.

## RF management

Radio Dynamic Adjustment (RDA) technology automatically assigns channels and power settings, provides DFS/TPC, and ensures that APs stay clear of all radio frequency interference (RFI) sources to deliver a reliable, high-performance WLAN. The OmniAccess Stellar AP1301H can be configured to provide part-time or dedicated scanning for spectrum analysis and wireless intrusion protection.

## Product specifications

Features	Description
Radio specifications	<ul style="list-style-type: none"> <li>• AP type: Indoor</li> <li>• Dual Radio, 5 GHz 802.11ax 2x2:2 and 2.4 GHz 802.11ax 2x2:2               <ul style="list-style-type: none"> <li>– 5 GHz: 2x2:2 up to 1.2Gbps wireless data rate to individual 2SS HE80 802.11ax client devices</li> <li>– 2.4 GHz: 2x2:2 up to 573Mbps wireless data rate to individual 2SS HE40 802.11ax client devices</li> </ul> </li> <li>• Supported frequency bands (country-specific restrictions apply):               <ul style="list-style-type: none"> <li>– 2.400 to 2.4835 GHz</li> <li>– 5.150 to 5.250 GHz</li> <li>– 5.250 to 5.350 GHz</li> <li>– 5.470 to 5.725 GHz</li> <li>– 5.725 to 5.850 GHz</li> </ul> </li> <li>• Available channels: Dependent on configured regulatory domain</li> <li>• Brazil: Maximum transmit power: 21dBm on 2.4GHz, 21dBm on 5GHz</li> <li>• Maximum (aggregate, conducted total) transmit power (limited by local regulatory requirements):               <ul style="list-style-type: none"> <li>– 21dBm on 2.4GHz (18dBm per chain)</li> <li>– 21dBm on 5GHz (18dBm per chain)</li> </ul> </li> <li>• DFA (Dynamic Frequency Adjustment) optimises available channels and provides proper transmission power</li> <li>• Short guard interval for 20-MHz, 40-MHz, and 80-MHz channels</li> <li>• Transmit beamforming (TxBF) for increased signal reliability and range</li> <li>• 802.11n/ac packet aggregation: Aggregated Mac Protocol Data Unit (A-MPDU), Aggregated Mac Service Data Unit (A-MSDU)</li> <li>• Supported data rates (Mbps):               <ul style="list-style-type: none"> <li>– 802.11b: 1, 2, 5.5, 11</li> <li>– 802.11a/g: 6, 9, 12, 18, 24, 36, 48, 54</li> <li>– 802.11n(2.4GHz): 6.5 to 300 (MCS0 to MCS15, HT20 to HT40)</li> <li>– 802.11n(5GHz): 6.5 to 600 (MCS0 to MCS31, HT20 to HT40)</li> <li>– 2.4GHz 256-QAM: 6.5 to 400 (MCS0 to MCS9, NSS=1 to 2, VHT20 to VHT40)</li> <li>– 802.11ac: 6.5 to 866.7 (MCS0 to MCS9, NSS = 1 to 2, VHT20 to VHT80)</li> <li>– 802.11ax(2.4GHz): 3.6 to 573 (MCS0 to MCS11, NSS = 1 to 2, HE20 to HE40)</li> <li>– 802.11ax(5GHz): 3.6 to 1201 (MCS0 to MCS11, NSS = 1 to 2, HE20 to HE80)</li> </ul> </li> <li>• Supported modulation types:               <ul style="list-style-type: none"> <li>– 802.11b: BPSK, QPSK, CCK</li> <li>– 802.11a/g/n/ac: BPSK, QPSK, 16-QAM, 64-QAM, 256-QAM</li> <li>– 802.11ax: BPSK, QPSK, 16-QAM, 64-QAM, 256-QAM, 1024-QAM</li> </ul> </li> <li>• 802.11n high-throughput (HT) support: HT 20/40</li> <li>• 802.11ac very high throughput (VHT) support: VHT 20/40/80</li> <li>• 802.11ax high efficiency (HE) support: HE 20/40/80</li> <li>• Advanced Cellular Coexistence (ACC)               <ul style="list-style-type: none"> <li>– Minimises interference from 3G/4G cellular networks, distributed antenna systems, and commercial small cell/femtocell equipment</li> </ul> </li> <li>• Bluetooth 5 / Zigbee: up to 6dBm transmit power (class 1) and -93dBm receive sensitivity</li> </ul>

## Ordering information

Access Points	Description
OAW-AP1301H-RW	OmniAccess Stellar Indoor AP1301H. Dual radio 2.4/5Ghz 2x2 802.11ax, omni antenna. 1x GbE uplink, 4x GbE downlink (1 PSE), RJ45 passthrough pair, BLE/Zigbee radio, 1x USB and 1x 48V DC. Unrestricted Regulatory Domain. Not for use in US, Egypt, Japan.
OAW-AP1301H-ME	OmniAccess Stellar Indoor AP1301H. Dual radio 2.4/5Ghz 2x2 802.11ax, omni antenna. 1x GbE uplink, 4x GbE downlink (1 PSE), RJ45 passthrough pair, BLE/Zigbee radio, 1x USB and 1x 48V DC. Restricted Regulatory Domain: Egypt, Israel.
OAW-AP1301H-US	OmniAccess Stellar Indoor AcP1301H. Dual radio 2.4/5Ghz 2x2 802.11ax, omni antenna. 1x GbE uplink, 4x GbE downlink (1 PSE), RJ45 passthrough pair, BLE/Zigbee radio, 1x USB and 1x 48V DC. Restricted Regulatory Domain: US.

Accessories	Description
PD-9001GR/AT/AC	1-Port IEEE 802.3at PoE Midspan. Port speed 10/100/1000M PoE power 30W. No power cord included. Please order PWR-CORD-XX for country specific power cord.
ADP-50GRBE	48V/50W AC-to-DC Power Adapter with Type A DC plug 2.1*5.5*9.5mm circular, straight. Please order PWR-CORD-XX for country specific power cord.

## Warranty

OmniAccess Stellar Access Points come with Hardware Limited Lifetime Warranty (HLLW).

## Services and support

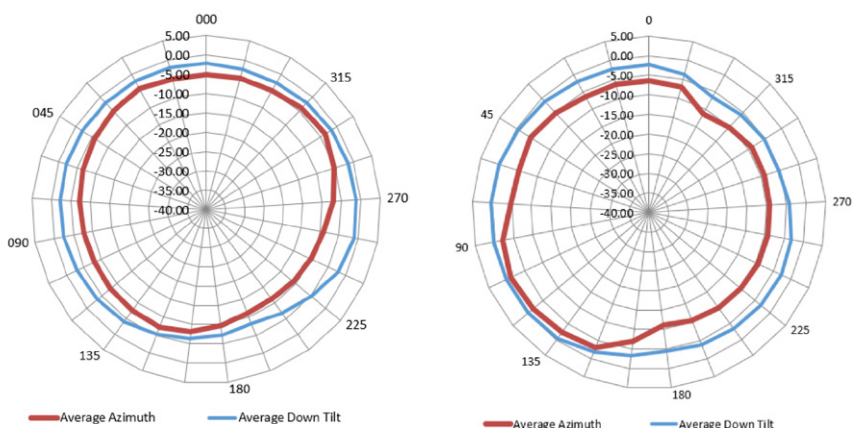

OmniAccess Stellar Access Points include one year of complementary SUPPORT Software for partners. For more information about our Professional services, Support services, and Managed services, please go to:

<http://enterprise.alcatel-lucent.com/?services=EnterpriseServices&page=directory>
